The Easiest Way to get onto the Internet
imagine.com is one of the first Nationwide Internet Access Providers with specifically designed services to meet the needs of PC and Macintosh users. imagine.com is designed with the same ease-of-use technology. And with our state-of-the-art network, we have one of the fastest Internet connections available.

You’re Really On the Net
Unlike information services like America Online, Prodigy or Compuserve, imagine.com actually allows your PC or Macintosh to become a node directly on the INTERNET, over 40 million computers in over 80 countries. And than you can run any of the popular Internet applications, like graphical World Wide Web browsers such as Netscape or Microsoft Explorer, E-mail, FTP, News or Weather software. You can see anything that’s available on the Net.

The Speed Advantage with imagine.com
We have twelve years experience in designing fast state-of-the-art computer networks, we use high speed UNIX RISC systems to manage our internet connectivity, and finally we use custom designed advanced object oriented software to communicate globally. All of this, combined with your PPP connection ensures fast access, and if you match your modem with our digital modems, you can cruise the Internet at “Superhighway Speeds”.

Access to our Internet E-mail and World Wide Web Servers
Connect to our WWW Server and jump to locations around the globe. Send your E-mail to our E-mail servers and we will forward it anywhere in the world instantly. There are no additional charges.

You may already have all you need
If you have a modem and computer, imagine.com can provide you with the connectivity to get on the Internet. And if you don’t, we think you’ll find the purchase of a 28.8, 33.6 or K56flex/X2 fast modem well worth the money, especially when combined with Internet access through imagine.com.

The Sign Up Process
Signing up is just as easy as the rest of imagine.com. All you need to do is FAX, call or send in your application along with a Mastercard or Visa number or personal check for the initial sign up fee and a prepaid one month access fee. After you sign up, imagine.com creates a PPP account and an Email account in your name, with the password you specify. You then use this account to log in, and you’re on the Internet!

Right for first timers and experts alike
If you’ve wondered what the Internet is all about, imagine.com makes getting connected as easy as possible. And if you’ve gotten a taste of the Internet through an information service, imagine.com is an easy way to step up to the real thing.
Here’s all you need to get on the Internet
